**RE: U.S. Army Corps of Engineers Continuing Authorities Program Shoreline  
Erosion Study for the Northern Shoreline of Fort Morgan in Baldwin  
County, Alabama**

Colonel Chapman,

The Baldwin County Commission is requesting assistance from the U.S. Army Corps of Engineers for a **study under** the USACE Continuing Authorities Program to address beach erosion, provide hurricane storm damage reduction and aquatic ecosystem restoration, along with the possible beneficial use of dredge material at Fort Morgan, Baldwin County, Alabama. The proposed project location is situated on the north side of the Fort Morgan Peninsula, bounded by the Fort Morgan Historic Site on the west and Oyster Bay to the east.

Fort Morgan is an unincorporated community just west of Gulf Shores, Alabama. This area has a long and rich history as home to Fort Morgan, which served as a defensive point for Mobile Bay starting in the early 19th century. Fort Morgan is also home to the Bon Secour National Wildlife Refuge, which works to protect endangered and native species in Coastal Alabama. The refuge encompasses some of Alabama's last remaining undisturbed coastal barrier habitat, including beach dunes and rolling pine-oak woodlands.

Over the years, the Fort Morgan Peninsula has been affected by various factors such as sea-level rise, severe storms, ship-wake induced erosion, real estate development and even oil spills. These activities have impacted hundreds of acres of salt marsh, resulting in a sediment budget deficit that hinders the transport of littoral sand needed for the area's renourishment.

**The County understands that a design for possible beneficial use will be a part of the request, but we would like to emphasize that the main purpose for the Letter of Intent is for the study to determine the cause of the severe shoreline erosion along the northern shoreline of Fort Morgan.**

The Baldwin County Commission intends to serve as the sponsor for the project. We understand that the estimated cost of the feasibility study would be prepared following a determination of

federal interest. We further understand that a Federal Interest Determination (FID) report shall be prepared following the initial investigation by USACE.

We are aware that the first \$100,000 in funding for the feasibility study is fully federally funded and that any further study costs above that would need to be approved by the County Commission and would be cost-shared 50% federal and 50% non-federal.

We are committed to this project and are willing, able, and would be financially prepared to participate in the study. We look forward to executing a cost-sharing agreement for the study at the appropriate time in the process. Thank you for your assistance with this much-needed project. Please contact Ashley Campbell, Natural Resources Planner, by email at [ashley.campbell@baldwincountyal.gov](mailto:ashley.campbell@baldwincountyal.gov) or by phone at 251.423.3632 for further information or assistance.

Sincerely,

Matthew P. McKenzie, Chairman  
Baldwin County Commission
